

User Assistance for NetBotz Rack Monitor 250

User Assistance for NetBotz Rack Monitor 250

NetBotz Rack Monitor 250 firmware version 6.6.7 has been released! New features include ROBOT Vulnerability Mitigation, options for mass sensor configuration (see the *User Guide*), and support for EcoStruxure IT Gateway.

Additionally:

- Certain temperature values on different tabs now report the same value when updated at the same time.
- Some CLI commands have been improved or updated to match the behavior of the Web User Interface (Web UI).
- Resetting lost communication alarms now clears lost communication alarms from StruxureWare Data Center Expert (DCE).

For more information, see the release notes under What's new.

Other Notes:

- Update the firmware on the NetBotz Rack Monitor 250 and the Wireless Temperature Sensor to the most recent version before using the product.
- **IMPORTANT!** The NetBotz Rack Monitor 250 is not a PoE compatible device. Do not connect a NetBotz Rack Monitor 250 to a PoE (Power over Ethernet) switch.
