

Together we can do more

In spring 2015 we launched StruxureWare Localization where we opened translations of products to the members of DCIM Support Community. As a multilingual user of StruxureWare products this was your chance to help improve and contribute to the translations of upcoming versions.

Now StruxureWare Data Center v8.0 is out. This is the first product to be translated with your contributions. And we're proud to say it has been a huge success!

The project is fully translated and available in eleven languages. With your help we're able to deliver a better product to the regional market. Thank you!

A special thanks to our top contributors:

Christian Stolte

Dominique Cuzin

Roman Osadchyi

Jorge Jimenez

Yoshinobu Suzuki

Fergus Wong

Ziqiang Wu

Thank you for your amazing effort in this!
